TILT GARAGE DOORS

Smartech Tilt Garage doors are ideal for all carport and garage door openings, especially larger openings where decorative claddings, beautiful timbers or the latest aesthetically pleasing finishes are specified.

Gone are the days when garage doors were just a necessity. Make it a feature of your home or building.

Make it yours: Smartech tilt garage doors can be used with countless cladding options such as timber, fibre cement, aluminium, metal, imitation brick, ceramic and much more. The choice is yours. Note: Cladding is not supplied or installed by Smartech. The builder or project manager must take responsibility for the supply and installation of the cladding on site.

Blend it in: Our whole range is available as either standard or flush finish. Flush finish tilt garage doors offer clean, pleasing lines and readily integrate with the building facade or feature wall.

Smooth operation: Manual or motorised operation of our doors is possible, but most often they are motorised for user convenience. We only use high-quality components for the drive system and motors of all our tilt garage doors (if applicable).

Made to order: Everything is made to order, which allows you to specify exactly what you want.

Made to last: Every component is carefully designed and chosen to ensure there is no compromise between performance and durability.

There are two lines available in our tilt garage door range: **Economy and Premium**

What is the difference? In addition to all the benefits mentioned on the previous page, the **Premium** line includes additional features such as powder coating, heavy duty weight bearing capacity, motorisation, superior sealing, larger dimensions, sustainable design and assembly.

Please refer to the table below for more detail.

	Economy		Premium	
Finish type	Standard	Flush	Standard	Flush
Aluminium frame	Standard		Standard	
Frame structure	RHS aluminium extrusion		Proprietary aluminium extrusion	
Powder coating	Optional		Standard
